## 1. Introduction

This report presents the core textbook preparation developed according to the ontology schema adopted for collecting educational material, aligning with the results of WP3.

The main result of WP3 is the core textbook content. The content includes the traditional textual content, tables, images, charts, diagrams, etc., and is based on the ontology schema. This schema defines basic terms and relations between terms, which enables a semantically rich description of the textbook content. The content is prepared using the support computer tools, which is also defined in this work package. The content is enhanced by additional content not included in the original textbooks and by new multimedia formats and improved pedagogical approaches that serves to increase the attractiveness of the subject fields.

The University of Pisa (UNIPI) is the leading organization and coordinator for this work package.

The report comprises four main sections, each aligned with a related activity (A1-A4).

- Section 2 addresses WP3-A1, namely the "**WP3-A1: Definition of the ontology schema for textbook content preparation**". In this section, the state of the art of ontology mapping in education is reviewed in conjunction with the acknowledged pedagogical theory of Constructive Alignment (CA), a pillar of the TET project. Based on the results of this state-of-the-art review, the CONstructively ALigned (CONALI) ontology emerged as the most aligned for this project, although modifications were necessary to meet the TET project's requirements.
- In the subsequent Section 3, related to the second activity (i.e., A2) of WP3 and named "**WP3-A2: Tools for the ontology schema implementation**" the new version of CONALI 3.0 is defined using Protégé, and starting from the CONALI.owl file. For the simplicity of material collection and initial drafting, a Word template aligned with the input required for CONALI 3.0 was created. The results of this activity are the CONALI 3.0 and the template for material collection.

**Pripombe dodat [DS1]:** Maybe we should just write: "The main result of WP3 is the core textbook content. The content includes the traditional textual content, tables, images, charts, diagrams, etc., and is based on the ontology schema. This schema defines basic terms and relations between terms which enables a semantically rich description of the textbook content. The content is prepared using the support computer tools which is also defined in this work package. The content is enhanced by additional content not included in the original textbooks and by new multimedia formats and improved pedagogical approaches that serves to increase the attractiveness of the subject fields."

Co-funded by  
the European Union

- In Section 4, related to the activity A3 and entitled “**WP3-A3: Preparation of core textbook content**” the material was uploaded to the template format by each partner of the consortium. The results of this activity are the template filled with the consortium information.
- The final step A4 addressed in Section 5 “**WP3-A4: Review of core textbook content and optimizations**”, involved the review of the updated material by the leading team of WP3 (UNIPI) and a consortium-wide review in a consortium meeting.

The following Table 1 summarizes the main acronyms in alphabetic order, full name and short description.

**Table 1:** Acronyms, full name, and short descriptions

Acronym	Full name	Short description
ATs	Assessment Tasks	In the Constructive Alignment framework, assessment tasks are not isolated evaluations but are purposefully linked to the specified Intended Learning Outcomes (ILOs). They serve as a means to verify whether students have successfully achieved the learning objectives set forth in the curriculum.
CA	Constructive Alignment	Constructive Alignment (CA) is a pedagogical theory and framework developed by John Biggs that emphasizes the importance of alignment in the design and delivery of educational experiences. The key components of constructive alignment include Intended Learning Outcomes (ILOs), Teaching and Learning Activities (TLA), and Assessment Tasks (ATs). The theory posits that for effective learning to occur, these three components must be closely aligned to ensure coherence and transparency in the educational process.
CONALI	Constructive Alignment Ontology	The CONstructiveALLignment (CONALI) ontology, is a recent application of ontologies in education, specifically in the context of Constructive Alignment (CA). Developed using the Ontology Web Language (OWL), CONALI provides a framework to represent the body of knowledge

related to CA, encompassing semantic relationships in a computer-readable format. The last version is CONALI 2.0.

EdU	Educational Units	Low-level granularity distinct modules or components within an educational program or curriculum. These units are designed to cover specific topics, themes, or skills, and they serve as the building blocks of the overall educational experience.
EGV	Educational Goal Verb	An Educational Goal Verb refers to a verb that articulates the specific actions or behaviors that students are expected to demonstrate as part of achieving educational goals. By incorporating precise verbs into ILOs, educators can better communicate the intended depth and complexity of learning, facilitating the alignment between ILOs, Teaching and Learning Activities (TLA), and Assessment Tasks (ATs) as per the principles of constructive alignment.
HE	Higher Education	Education that takes place at universities, colleges, and other institutions that award academic degrees. It typically follows the completion of secondary education (high school) and offers more advanced and specialized instruction. Higher education includes undergraduate and postgraduate programs, leading to degrees such as associate's, bachelor's, master's, and doctoral degrees.
ILOs	Intended Learning Outcomes	These are clear, specific, and measurable statements that articulate what students are expected to know, understand, and be able to do by the end of a course or educational program. ILOs serve as the starting point for instructional design and guide the selection of teaching strategies and assessment methods. These are made by EGV, context and content.
OWL	Ontology Web Language	Web Ontology Language is a powerful and expressive language used for representing and sharing ontologies on the World Wide Web. An ontology is a formal representation of knowledge, typically describing the relationships between entities within a specific domain. OWL is particularly designed to support the development of ontologies that enable machines to reason about information and enhance interoperability between applications.
SOLO	Structure of Observed Learning Outcome	The Structure of Observed Learning Outcome (SOLO) taxonomy is an educational framework designed to assess the levels of understanding and learning outcomes in students. SOLO taxonomy categorizes learning outcomes

		into different levels of complexity, providing a way to measure the depth of understanding a student has reached.
TLA	Teaching and Learning Activities	Methods, strategies, and activities employed by educators to facilitate student learning. In constructive alignment, TLAs are carefully chosen and designed to directly support the achievement of the intended learning outcomes, according to the selected EGV. The aim is to create engaging and relevant learning experiences that guide students toward the desired understanding and skills.
TET	The Evolving Textbook	Current project: development of a platform for engineering EdU representation, focusing on CA. The platform of TET requires to be built on educational ontology presenting scalability, and with alignment in content to allow collaborative update of the material.

## 2. WP3-A1: Definition of the ontology schema for textbook content preparation

This activity is based on the state-of-the-art review of the ontology in the field of education (Section 2.2) with specific focus on CA, briefly highlighted in Section 2.1 and recapping the main requirements for TET in Section 2.3.

### 2.1 Constructive Alignment (CA)

Contemporary education practices are shifting away from traditional methods of imparting knowledge towards a more constructive theory of learning [1]. Such a pedagogical paradigm emphasizes the significance of designing Educational Units (EdU) based on learners' activities rather than instructors' actions. Constructivist models delineate the learning process through two mechanisms: assimilation and accommodation. Assimilation involves integrating new knowledge into existing understanding, while accommodation entails the realignment of potentially incorrect or incomplete pre-existing knowledge in response to newly acquired information [2].

One practical application of this shift is known as CA, which places emphasis on the actions of learners and begins with clearly communicating the Intended Learning Outcomes (ILOs) for a particular EdU. These ILOs consist of content, context, and an Educational Goal Verb (EGV) [3]. The EGV, based on Bloom's Taxonomy [4], represents the core action that learners are expected to master upon completing the educational unit. To implement CA, the ILOs are

aligned with EdU activities using the EGV. In other words, the EGV are integrated into Teaching and Learning Activities (TLAs) and evaluated through Assessment Tasks (ATs) [1].

Application of such theory have been recently proposed analyzing the digitalization of engineer curricula [5] and the definition of industrial engineer archetypes [6].

## 2.2 Ontology Mapping in Education

The exploration of ontologies in the digitalization of learning material has been an extensive endeavor over the past decades.

The educational semantic web, initially conceptualized nearly two decades ago, remains a vibrant research area, emphasizing the benefits of an ontological approach for organizing diverse educational content types [7]. Noteworthy early works, such as OntoEdu in 2004, integrated cutting-edge technologies into an educational architecture, with a core focus on the educational ontology encompassing user adaptation, automatic composition, education service, and content models [8].

Subsequent developments introduced ontological distributed platforms and utilized the OWL language to define ontology schemas, broadening the goals beyond e-learning to encompass knowledge management systems [9,10].

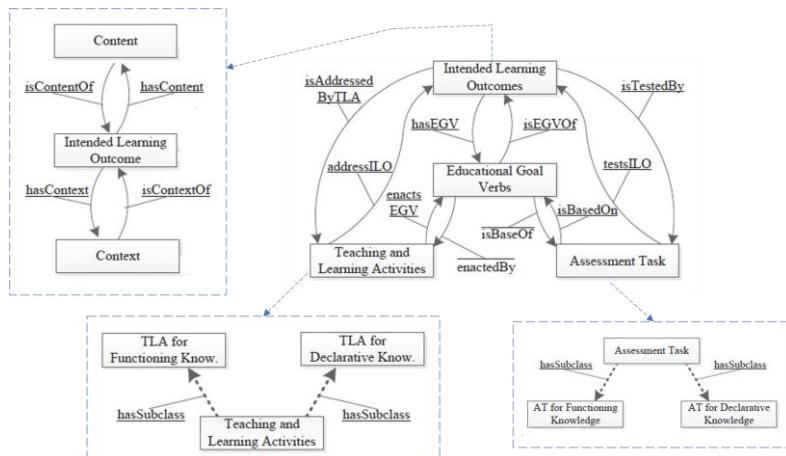

Several works have delved into ontologies for education, with a notable example being the Enhanced Course Ontology for Linked Education (ECOLE). As main contribution, it delves into the use cases and architecture of an educational platform leveraging Linked Open Data [11].

More recent works continue putting effort in the creation of electronic platform for teaching materials and the management of learning information [12,13], focusing on the development of educational ontology, which serves as a vital link between the educational domain, labour market, and personalized learning [14].

Among the reviewed ontologies, the application in education specifically using CA has been solely found in the CONstructiveALignment (CONALI) ontology proposed by Maffei et. al. (Fig.1) [15]. The adoption of such a model developed using the OWL provides a framework to describe the CA body of knowledge including all the relevant semantic relationships in a computer-readable format [15]. A step further in the adoption of ontology together with CA concepts is proposed in another work published by the same author [16]. In this more recent work, the CONALI ontology is present under a different version “2.0” of such that supports collection and analysis of big educational data from constructively aligned EdUs [16].

CONALI 2.0 model is publicly available<sup>1</sup>. Despite the valuable contribution offered by the CONALI 2.0 ontology, it does not represent the Bloom taxonomy levels of understanding and all the related required kinds of TLA and AT available in literature such as [1]. Finally, CONALI 2.0 does not support fast indexing of the featured content and context.

**Fig. 1.** CONALI ontology, classes and relations adapted from [15]. Light blue dotted lines show the lower level of granularity for ILOs, TLA and AT classes.

## 2.3 Results

Table 2 summarizes the retrieved ontologies within the educational context, their contribution to the field and the implementation of CA.

CONALI Ontology. A Framework for Design and Evaluation of Constructively Aligned Courses in Higher Education: Putting in Focus the Educational Goal Verbs [15]	OWL ontology presenting constructively alignment as main design principle	yes

In TET project, the focus was on the development of a platform for engineering EdU representation, focusing on CA with reliance to Bloom taxonomy instead of the Structure of Observed Learning Outcome (SOLO) taxonomy and without making distinction within declarative and functioning knowledge. The platform of TET requires to be built on educational ontology presenting scalability, and with alignment in content to allow collaborative update of the material.

As summarized in Table 2, despite the valuable works among the reviewed ontologies, CONALI is the only one with focus on CA, thus the best to be used in this work given the TET project requirements. However, CONALI does not exactly match with the TET requirements and needs upgrade. In the following Section, CONALI 2.0 is modified and CONALI 3.0 is defined adding the Bloom taxonomy and removing SOLO and some redundancy and not necessary information.

Co-funded by  
the European Union

### 3. WP3-A2: Ontology schema implementation

This activity addresses the gap highlighted in the previous activity WP3-A1 (Section 2): i.e., the lack of ready to use CA-based ontologies for education that support collaborative effort. Starting from the CONALI ontology 2.0 the consortium has reshaped the taxonomy and related semantic to match the requirements for the representation of EdU in TET using Protegè and starting from CONALI2.0 OWL file. In addition to that the ontology was expanded also to include a recent contribution in literature that helped mapping and characterizing TLA and AT based on the Bloom taxonomy level they serve: [1]. Finally, the need for indexing the content and context of the ILO was made explicit through the inclusion of specific keywords. The second result of this activity is the template developed in accordance with the new CONALI 3.0 for material collection.

#### 3.1. WP3-A2 Results: The CONALI 3.0

The CONALI 3.0 ontology was modified by (i.e., adding/removing classes, data properties, data object and individuals). As main modification for ILOs class we added: short description, Bloom Verb level, Content (keywords), Context (keywords), and for TLA we added: Course moment, Weekday date and time slot, Location, course material, link to material, keywords. During the ontology restructuring, SOLO taxonomy, functional and declarative knowledge were removed.

In more detail, we removed:

- the class *StructureofObservedLearningOutcome* and the related subclasses *ExtendedAbstractLevelOfUnderstanding*, *Multi-StructuralLevelOfUnderstanding*, *Pre-StructuralLevelOfUnderstanding*, *RelationalLevelOfUnderstanding*, *Uni-StructuralLevelOfUnderstanding*
- the class *KindOfKnowledge* and the related subclasses *DeclarativeKnowledge* and *FunctioningKnowledge*
- the subclasses *ATForDeclarativeKnowledge*, *ATForFunctioningKnowledge* from the class *AssessmentTask*
- the subclasses *TLAForDeclarativeKnowledge*, *TLAForFunctioningKnowledge* from the class *TeachingAndLearningActivities*
- the class *SecondCycleProfile*
- the class *Teacher*

- the class *Programme*

All the related object properties and data properties of the removed classes and subclasses were removed as well. All the ILO and Course instances of CONALI 2.0 were removed. On the other hand, we added:

- data types
  - Short description, string for the ILO
  - ILO\_ID, positive integer for the ILO
  - ContentKeyword, string for the content
  - ContextKeyword, string for the context
  - TLAKeywords, string for the TLA
  - TLAMaterialLink, string for the TLA
  - Course\_moment, string for the TLA
  - Weekday date and time slot, string for the TLA
  - Location, string for the TLA
- specific sub-classes of AT and TLA classes as identified in the paper recently published. The sub-classes of TLA inherits the father class relation for the EGVs as follows in the object property below.

<TeachingAndLearningActivity><enactsEducationalGoalVerbOf><EducationalGoalVerb><EducationalGoalVerb><isEnactedByTLA><TeachingAndLearningActivity>;

For the existing *TLA* class we added:

- *TLALevel1*: individuals (lecture, Reading material)
- *TLALevel2*: individuals (Mind map, Think-pair-share, Discussion, Reflection, Fishbowl)
- *TLALevel3*: individuals (Case study in real-life situation, Problem-solving tasks, Roleplay, Group work, Laboratory)
- *TLALevel4*: individuals (Debates, Class discussion, Jigsaw method, Think-pair-share, Fishbowl, Laboratory)
- *TLALevel5*: individuals (Journal, Debates, Mind map, Peer evaluation)
- *TLALevel6*: individuals (Brainstorm, Design a presentation, Create a new report, Construct a roleplay)

For the existing *AT* class we added:

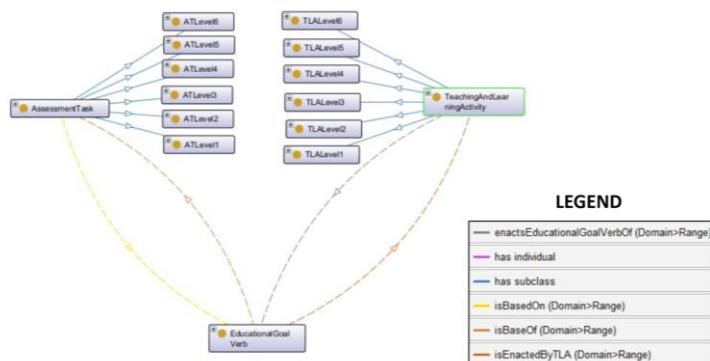

Pripombe dodat [DS2]: What do you mean by "eradicate"?

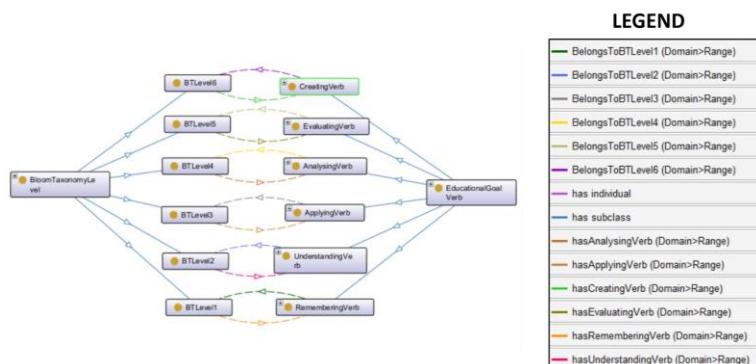

- *ATLevel1*: individuals (Multiple choice, quiz/test, question banks, take-home examinations)
  - *ATLevel2*: individuals (Mind maps, interview, debate, problem sheet, minutes, forum posts, open-book, individual presentation, group presentation, viva-voce)
  - *ATLevel3*: individuals (Abstract, case study, problem-solving tasks, roleplay, group work, portfolio, workbook, project)
  - *ATLevel4*: individuals (Thesis, annotated bibliography, literature review, debates, class discussion, jigsaw method, think-pair-share, fishbowl, laboratory)
  - *ATLevel5*: individuals (Report, reflection, journal, debates, mind map, peer evaluation, group work, teamwork)
  - *ATLevel6*: individuals (project, thesis, article, essay, creative work, demonstration, performance, roleplay)
- *BloomTaxonomyLevel* class and related sub-classes for each of the six levels: *BTLevel1*, *BTLevel2*, *BTLevel3*, *BTLevel4*, *BTLevel5*, *BTLevel6* taking as reference. The adopted approach for object properties is to link each BTLevel subclass to each EGV subclass. Then the following object properties were defined.

```
<BTLevel1> <hasRememberingVerb> <RememberingVerb>  
<RememberingVerb> <BelongsToBTLevel1> <BTLevel1>;  
<BTLevel2> <hasUnderstandingVerb> <UnderstandingVerb>  
<UnderstandingVerb> <BelongsToBTLevel2> <BTLevel2>;  
<BTLevel3> <hasApplyingVerb> <ApplyingVerb>  
<ApplyingVerb> <BelongsToBTLevel3> <BTLevel3>;  
<BTLevel4> <hasAnalysingVerb> <AnalysingVerb>  
<AnalysingVerb> <BelongsToBTLevel4> <BTLevel4>;  
<BTLevel5> <hasEvaluatingVerb> <EvaluatingVerb>  
<EvaluatingVerb> <BelongsToBTLevel5> <BTLevel5>;  
<BTLevel6> <hasCreatingVerb> <CreatingVerb>  
<CreatingVerb> <BelongsToBTLevel6> <BTLevel6>;
```

Figure 2 and 3 depict the classes and relations according to the modifications for the TLA/AT and BTLevel, respectively. The CONALI 3.0 ontology in the OWL format is publicly available<sup>2</sup>.

**Fig. 2.** CONALI 3.0 ontology AT and TLA classes and subclasses and relations

**Fig. 3.** CONALI 3.0 ontology BTlevl classes and subclasses and relations

<sup>2</sup>[https://unilj.sharepoint.com/:u/r/sites/ErasmusTETproject/Shared%20Documents/WP3-Core-Textbook-Content-Preparation/Report/V2\\_Ontology\\_CONALI\\_3.0?csf=1&web=1&e=JO10c3](https://unilj.sharepoint.com/:u/r/sites/ErasmusTETproject/Shared%20Documents/WP3-Core-Textbook-Content-Preparation/Report/V2_Ontology_CONALI_3.0?csf=1&web=1&e=JO10c3)

### 3.2. WP3-A2 Results: The template for CONALI 3.0

The base to collect the educational material was the template format developed in accordance with the CONALI 3.0 developed in Section 3.1. The template is attached in the following and can be accessed online<sup>3</sup>.

Intended Learning Outcomes (ILOs)																												
<p>The template for the formulation of the ILO is emphasizing the student perspective. All the ILO are formulated to address directly what is expected from the learner after following the related educational unit. Three are the key elements:</p> <ul style="list-style-type: none"> <li>- <b>Short description:</b> ILOs has in general from 150 to 250 characters.</li> <li>- <b>Bloom Verb Level:</b> detailing the action expected and referring to the expected level of understanding as expressed in the well-known Bloom taxonomy<sup>4</sup> selecting one of the following level: <ul style="list-style-type: none"> <li>o Level1_Recall facts and basic concepts "Remember": (define, duplicate, list, memorize, repeat, state)</li> <li>o Level2_Explain ideas or concepts "Understand": (classify, describe, discuss, explain, identify, locate, recognize)</li> <li>o Level3_Use information in new situations "Apply": (execute, implement, solve, use, demonstrate, interpret, operate)</li> <li>o Level4_Draw connections among ideas "Analyse": (differentiate, organize, relate, compare, distinguish, examine, test, analyze)</li> <li>o Level5_Justify a stand or decision "Evaluate": (appraise, argue, defend, judge, select, support, value, critique, weigh)</li> <li>o Level 6_Produce new or original work "Create": (design, assemble, construct, conjecture, formulate, author, investigate)</li> </ul> </li> <li>- <b>Content</b> to which the action indicated by the verb refer to and keywords enclosed in parentheses and in italics</li> <li>- <b>Context</b> where the action for the related content must be applied and keywords enclosed in parentheses and in italics</li> </ul>																												
<p><i>Table 1: ILOs for the CourseXX, Partner: XX</i></p>																												
<table border="1"> <thead> <tr> <th></th> <th>Short description</th> <th>Bloom Verb level</th> <th>Content (keywords)</th> <th>Context (keywords)</th> </tr> </thead> <tbody> <tr> <td>ILO1</td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td></td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td>ILO n</td> <td></td> <td></td> <td></td> <td></td> </tr> </tbody> </table>					Short description	Bloom Verb level	Content (keywords)	Context (keywords)	ILO1															ILO n

## Teaching and Learning Activities (TLA)

The template for the formulation of the TLA is emphasizing the following dimensions:

- What is the teacher supposed to do to enact the underlying ILO
  - What is the learner supposed to do to enact the underlying ILO
  - How does the suggested activity relate to good teaching practices as expressed in the 7 principles of good learning?

Table 2.1: TLAs for the Course: XX. Partner: XX

ILO reference (Highlight the Verb that need be aligned)	Teaching Activity (What the teachers do)	Learning Activity (What the students do)	How does this use the 7 Principles of good learning
ILO1	TA 1.1 TA1.2	LA1.1 LA1.2

## 4. WP3-A3: Preparation of core textbook content

### 4.1. Results

During this activity, the partner involved in the project collected EdU information following the template developed in accordance to the CONALI 3.0 (Section 3.2). Such templates were developed and filled by each institution (i.e. UNIPI, UNILJ, PRZ, KTH).

Four EdUs were initially planned: 1. Mechatronics (UNILJ), 2. Assembly (KTH), 3. Production planning and monitoring (UNIPI), 4. Simulations (PRZ).

Finally, the consortium decided to create six EdUs. The generated material is reported as follows (with a link to the online version provided)

Pripombe dodat [DS3]: I propose to write like this: "Finally we have decided to create six EdUs"

1. I) Mechatronic Actuators, Partner: UNILJ<sup>4</sup> (Appendix)
2. I) Assembly technology; II) Planning and control, Partner: KTH<sup>5</sup> (Appendix)
3. I) Manufacturing processes, Partner: UNIPI<sup>6</sup> (Appendix)
4. I) Data analysis; II) Simulation modelling, Partner: PRZ<sup>7</sup> (Appendix)

## 5. WP3-A4: Review of core textbook content and optimizations

### 5.1. Results

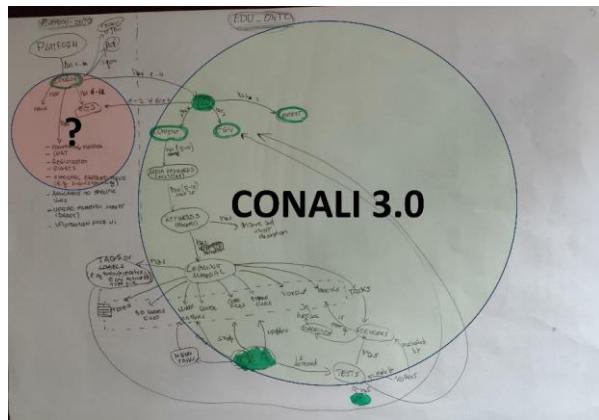

The result of this activity is the following report on how to improve the core textbook content. The main result of this activity is the report on the core textbook content analysis. The report has been prepared by the leading partner with the contribution of the other partners in a consortium meeting to cross-validate and review the uploaded material in the templates after the first round, as well as separate check from the leading organization in accordance with the ontology schema.

The report includes two main sections, namely improvements and optimizations of the i) ontology schema and the ii) textbook content.

- i) **Ontology schema improvements:** The CONALI 3.0 has been approved by the consortium. Additional improvements can occur in the following stage of the project but the current release fits with the expected result, so no specific improvements have been identified. However, a way to improve the overall linkage of the CONALI 3.0 ontology in the TET platform is trying to define a new ontology (from technical perspective) that defines the main aspects, functions and relations of the platform itself with the CONALI one. This ontology (or other formal definition) will be developed during the technical WP4 as initial design stage of the platform itself to establish the linkage of WP3 and WP4. The design of these aspects will also be based on the outcome from WP2 for technical decisions on main functionalities of the platform.

An inception idea was introduced during the initial meeting of the project and a draft of the ontology development is reported in Figure 4, highlighting the current stage of development that cover the right part (with the green CONALI3.0 label) of the schema, while the left (question mark and pink label) and the need to link left and right will be addressed WP4.

Pripombe dodat [DS4]: It would be nice to name the figure.  
Pripombe dodat [DS5]: Can we write about the "pink part" of the ontology in WP4 report?

**Fig. 4.** Drafted CONALI 3.0 ontology linkage to the platform architecture during the initial meeting of WP3. The green part is developed in WP3-A2 and material added in WP3-A3 and optimized in WP3-A4. The pink part will be addressed in WP4 during the initial design stage of the platform to ensure linkage between CONALI3.0 and the platform architecture.

- ii) ***Textbook content improvements:*** Several issues have been identified during the consortium meeting and during the leading partner review. Among the most important the following topics have been identified with high relevance for the development of the platform and the improvement of the core textbook content:

How to manage the accessibility of data? Is this material public (most universities have copyright issues on the Teaching and Learning material)? Discuss GDPR issues (it can be anonymous contribution; the registration will be with official university email but will be hidden and student can use a nickname) and Licensing for the content (creative common license). Proposed solution concerns the creation of a “accessibility right classification” table where each file updated from the consortium was classified as public (licensed under a Creative Commons Attribution Non-Commercial Share Alike 4.0 International License) or private. The table can be accessed in the Shared drive<sup>8</sup>. This information will be used in the design of the platform and accessibility right for the material in WP4. As other point

<sup>8</sup> <https://unilj.sharepoint.com/:r/sites/ErasmusTETproject/Shared%20Documents/WP3-Core-Textbook-Content-Preparation/WP3-A4%20Review%20of%20core%20textbook%20content%20and%20optimizations/Accessability%20right%20classification.xlsx?d=wde084285526140c1a18aaaf733ac81f60&csf=1&web=1&e=DGoHOT>

Co-funded by  
the European Union

to be discussed in WP4 is the file format (e.g., PDF where possible) and language (e.g., using Google Translate for non English material).

After a second round of material update for all the consortium partners, specific recommendations are reported below:

- UNIPI (Manufacturing processes): Overall all the fields of the table are well-completed and rich in information. If possible, add additional material and related links (e.g., book chapters or slides). If possible, add the links to the written test in the AT template.
- PRZ (Data analysis; Simulation modelling,): Add the links to the material highlighted in the template. If possible, add the links of the written test to the AT template. The remaining fields of the table are well-completed and rich in information.
- KTH (Assembly technology; Planning and control): Overall all the fields of the table are well-completed and rich in information. Both the courses are well done. If possible, add additional material and related links. If possible, add the links of the written test to the AT template.
- UNILJ (Mechatronic Actuators). Add the links to the material highlighted in the template. If possible, add the links to the written test to the AT template. The remaining fields of the table are well-completed and rich in information.

During the last meeting the updated materials according to the above guidelines were presented by each partner and the final cross-validation was performed. Final reviewed material was collected as part of the WP3-A4 output<sup>9</sup> and can be accessed in Appendix for each consortium member (KTH need update).

### Intended Learning Outcomes (ILOs)

The template for the formulation of the ILO is emphasizing the student perspective. All the ILO are formulated to address directly what is expected from the learner after following the related educational unit. Three are the key elements:

- **Short description:** ILOs has in general from 150 to 250 characters.
- **Bloom Verb Level:** detailing the action expected and referring to the expected level of understanding as expressed in the well-known Bloom taxonomy<sup>1</sup> selecting one of the following level:
  - o Level1\_Recall facts and basic concepts "Remember": (define, duplicate, list, memorize, repeat, state)
  - o Level2\_Explain ideas or concepts "Understand": (classify, describe, discuss, explain, identify, locate, recognize)
  - o Level3\_Use information in new situations "Apply": (execute, implement, solve, use, demonstrate, interpret, operate)
  - o Level4\_Draw connections among ideas "Analyse": (differentiate, organize, relate, compare, distinguish, examine, test, analyze)
  - o Level5\_Justify a stand or decision "Evaluate": (appraise, argue, defend, judge, select, support, value, critique, weigh)
  - o Level 6\_Produce new or original work "Create": (design, assemble, construct, conjecture, formulate, author, investigate)
- **Content** to which the action indicated by the verb refer to and keywords enclosed in parentheses and in italics
- **Context** where the action for the related content must be applied and keywords enclosed in parentheses and in italics

Table 1: ILOs for the Course: Mechatronic Actuators, Partner: UNILJ

	Short description	Bloom Verb level	Content (keywords)	Context (keywords)
ILO1	Compare pneumatic, hydraulic and electric actuators and select a suitable actuator for a particular application in terms of cost, environmental conditions and operating conditions.	Level 4: analyse, compare Level 5: evaluate, select	pneumatic actuators, hydraulic actuators, electric actuators, characteristics, actuators cost, environmental conditions, operating conditions <i>(actuators, characteristics, comparison)</i>	selection of a suitable actuator for a particular application <i>(mechatronic application, suitable actuator, costs, environmental conditions, operating conditions)</i>
ILO2	Understand the role of different electronic semiconductor elements for mechatronic actuators and implement them.	Level 2: understand Level 3: apply, implement	semiconductor elements for mechatronic actuators, diodes, transistors, thyristors, silicon controlled rectifiers, insulated-gate bipolar transistor, characteristics	use of semiconductor elements in mechatronic actuator applications <i>(signal processing, control and regulation, power management, sensing and feedback, heat dissipation, protection)</i>

<sup>1</sup> For more info refer to: <https://doi.org/10.3390/educsci12070438>.

1

Co-funded by  
the European Union

			<i>(semiconductor, semiconductor elements, diode, transistor, thyristor)</i>	
ILO3	Implement drive solutions with different electric drives on different platforms.	Level 3: apply, implement	<p>mechanical drives, equations of motion, linear systems, motion trajectories, velocity profiles, axis types, bearing types, coupling types, sensors, torque matching</p> <p><i>(drives, linear systems, motion, displacement, velocity, acceleration, velocity profile, displacement, precision and accuracy, axes, bearings, couplings)</i></p>	<p>implementation of drives for mechatronic applications on different platforms</p> <p><i>(mechatronic application, drive solutions, development platforms)</i></p>
ILO4	Use a mechatronic actuator in a closed-loop system.	Level 3: apply, use	<p>actuator as part of a control system, modelling of control systems, sensors, open and closed-loop control and regulation, implementation of controllers, PID control</p> <p><i>(control system, modelling, open-loop control, closed-loop control and regulation, controller, PID control)</i></p>	<p>mechatronic actuator used in a closed-loop system for precise and stable control according to specified requirements for the time behaviour of a system</p> <p><i>(actuator precise and stable control, operating requirements, time behaviour)</i></p>

### Teaching and Learning Activities (TLA)

The template for the formulation of the TLA is emphasizing the following dimensions:

- What is the teacher supposed to do to enact the underlying ILO
- What is the learner supposed to do to enact the underlying ILO
- How does the suggested activity relate to good teaching practices as expressed in the 7 principles of good learning<sup>2</sup>

*Table 2.1: TLAs for the Course: Mechatronic Actuators, Partner: UNIL*

TODO: TOLE TABELO REVIDIRAJ, POTEM KO IZPOLNIŠ ŠE TABELO 2.2. – DEJANSKI TEACHING ASSIGNMENTI

ILO reference (Highlight the Verb that need be aligned)	Teaching Activity (What the teachers do)	Learning Activity (What the students do)	How does this use the 7 Principles of good learning
ILO1 <b>Compare</b> pneumatic, hydraulic and electric actuators and <b>select</b> a suitable actuator for a particular application in terms of cost, environmental conditions and operating conditions	<p>TA 1.1 <b>Present</b> different types of actuators</p> <p>TA 1.2 <b>Explain</b> the advantages and disadvantages of different types of actuators in real applications in terms of cost, environmental and operating conditions.</p> <p>TA 1.3 <b>Describe</b> and <b>demonstrate</b> real-world applications of selected types of actuators with a focus on electric actuators (motors).</p> <p>TA 1.4 <b>Encourage</b> discussion on the correct choice of actuator type</p>	<p>LA 1.1 <b>Listen</b> to the presentation, take notes, and ask questions.</p> <p>LA 1.2 <b>Listen</b> to the presentation, take notes, and ask questions.</p> <p>LA 1.3 <b>Apply</b> and <b>evaluate</b> the use of selected types of electric actuators in a laboratory environment: DC motor, stepper motor, servo motor, asynchronous motor. Analyze	categorize, contrast, compare, debate, inspect	Debates, Class discussion, Jigsaw method, Think-pair-share, Fishbowl, Laboratory
Evaluate	assess, conclude, justify, measure	Journal, Debates, Mind map, Peer evaluation
Create	design, develop, revise, formulate	Brainstorm, Design a presentation, Create a new report, Construct a roleplay

### Assessment Task

The template for the formulation of the AT is emphasizing different assessment strategies for different verbs and different learning style.

*Table 4: TAs for the Course: Mechatronic Actuators, Partner: UNIL*

ILO reference (Highlight the Verb)	Assessment task 1	Assessment task 2	Assessment task n
ILO1 <b>Compare</b> pneumatic, hydraulic and electric actuators and <b>select</b> a suitable actuator for a particular application in terms of cost, environmental conditions and operating conditions	<b>Bloom level:</b> 5 <b>Type***:</b> group work  <b>Short description:</b> Write a report on laboratory exercises on different types of actuators. The report includes measurements, answers to the questions, evaluations and discussions.	<b>Bloom level:</b> 6 <b>Type***:</b> Project  <b>Short description:</b> Design and build a mechatronic system that contains a selected actuator.	
ILO2 <b>Understand</b> the role of different electronic semiconductor elements for mechatronic actuators and <b>implement</b> them.	<b>Bloom level:</b> 5 <b>Type***:</b> group work  <b>Short description:</b> Write a report on laboratory exercises on different types of semiconductor components. The report includes measurements, answers to the questions, evaluations and discussions.	<b>Bloom level:</b> 6 <b>Type***:</b> Project  <b>Short description:</b> Design and build a mechatronic system that uses semiconductor components for various functionalities.	
ILO3 <b>Implement</b> drive solutions with different electric drives on different platforms.	<b>Bloom level:</b> 5 <b>Type***:</b> group work  <b>Short description:</b> Write a report on laboratory exercises on different types of electric motor drives. The report includes measurements, answers to the questions, evaluations and discussions.		
ILO4 <b>Use</b> a mechatronic actuator in a closed-loop system.	<b>Bloom level:</b> 5 <b>Type***:</b> group work  <b>Short description:</b> Write a report on laboratory exercises on different types of electric motor closed-loop control. The report includes measurements, answers to	<b>Bloom level:</b> 6 <b>Type***:</b> Project  <b>Short description:</b> Design and build a mechatronic system that functions as a closed-loop system.

Bloom Taxonomy	EGV	Assessment Task (Examples)
Remember	arrange, define, list, identify	Multiple choice, quiz/test, question banks, take-home examinations, Concept/mind maps, interview, debate, problem sheet, minutes, forum posts, open-book, individual presentation, group
Comprehension	classify, discuss, present, rewrite	Abstract, case study, vocabulary, portfolio, worksheet, project
Apply	solve, calculate, demonstrate, organize, use	Abstract, case study, problem-solving tasks, roleplay, group work, portfolio, worksheet, project
Analyze	categorize, contrast, compare, debate, inspect	Thesis, annotated bibliography, literature review, debates, class discussion, jigsaw method, think-pair-share, fishbowl, laboratory Report, reflection, journal, debates, mind map, peer evaluation, group work, teamwork
Evaluate	assess, conclude, justify, measure	Project thesis, article, essay, creative work, demonstration, performance, roleplay, recorded/rendered creative work,
Create	design, develop, revise, formulate	

## 6.2. KTH

### Intended Learning Outcomes (ILOs)

The template for the formulation of the ILO is emphasizing the student perspective. All the ILO are formulated to address directly what is expected from the learner after following the related educational unit. Three are the key elements:

- **Short description:** ILOs has in general from 150 to 250 characters.
- **Bloom Verb Level:** detailing the action expected and referring to the expected level of understanding as expressed in the well-known Bloom taxonomy<sup>1</sup> selecting one of the following level:
  - o Level1\_Recall facts and basic concepts "Remember": (define, duplicate, list, memorize, repeat, state)
  - o Level2\_Explain ideas or concepts "Understand": (classify, describe, discuss, explain, identify, locate, recognize)
  - o Level3\_Use information in new situations "Apply": (execute, implement, solve, use, demonstrate, interpret, operate)
  - o Level4\_Draw connections among ideas "Analyse": (differentiate, organize, relate, compare, distinguish, examine, test, analyze)
  - o Level5\_Justify a stand or decision "Evaluate": (appraise, argue, defend, judge, select, support, value, critique, weigh)
  - o Level 6\_Produce new or original work "Create": (design, assemble, construct, conjecture, formulate, author, investigate)
- **Content** to which the action indicated by the verb refer to and keywords enclosed in parentheses and in italics
- **Context** where the action for the related content must be applied and keywords enclosed in parentheses and in italics

Table 1: ILOs for the Course Assembly technology, Partner: KTH

	Short description	Bloom Verb level	Content (keywords)	Context (keywords)
ILO1	describe the role of the assembly process within the manufacturing domain and discuss its importance	Level_2	the role of the assembly process, importance <i>(assembly process, assembly line)</i>	Manufacturing domain
ILO2	create mathematical and feature models of assemblies and use them in context of design and evaluation of assembly systems	Level_6	mathematical and feature models of assemblies <i>(modelling, assembly feature, parameters, constraints, tolerances)</i>	design and evaluation of assembly systems <i>(design, assembly system)</i>
ILO3	account for the dynamic and static constraints of a manual or automatic assembly process	Level_4	the dynamic and static constraints <i>(constraints, dynamic, static)</i>	a manual or automatic assembly process <i>(assembly process, manual assembly, automatic assembly)</i>

<sup>1</sup> For more info refer to: <https://doi.org/10.3390/educsci12070438>.

ILO4	analyse a given product and define feasible assembly sequences	Level_4	Feasible assembly sequences <i>(assembly sequences, product analysis, workflow analysis)</i>	Given product
ILO5	choose the best sequence by applying technical and economic criteria	Level_4	Best sequence applying technical and economic criteria <i>(sequence analysis, technical criteria, economic criteria)</i>	Given product
ILO6	describe the function of all the elements of an assembly system (both automatic and manual)	Level_2	the function of all the elements <i>(function, element)</i>	an assembly system (both automatic and manual) <i>(assembly system, manual assembly, automatic assembly)</i>
ILO7	evaluate the impact of the product design on the assembly process, by applying the Boothroyd DFA methodologies	Level_5	the impact of the product design by applying the Boothroyd DFA methodologies <i>(DFA, product design, impact, design efficiency)</i>	on the assembly process <i>(assembly process)</i>
ILO8	identify the requirements on design of an assembly station and provide instructions for the subsequent implementation	Level_2	Requirements on design and instructions for the subsequent implementation <i>(Assembly sequence, assembly requirements, design requirement)</i>	Assembly station <i>(assembly station)</i>
ILO9	calculate the costs and the most important economical key performance indicators (KPIs) for standard assembly systems (both manual and automatic)	Level_3	the costs and the most important economical key performance indicators (KPIs) <i>(KPI, cost, economic performance)</i>	standard assembly systems (both manual and automatic) <i>(standard assembly system, manual assembly, automatic assembly)</i>

### Teaching and Learning Activities (TLA)

The template for the formulation of the TLA is emphasizing the following dimensions:

- What is the teacher supposed to do to enact the underlying ILO
- What is the learner supposed to do to enact the underlying ILO
- How does the suggested activity relate to good teaching practices as expressed in the 7 principles of good learning<sup>2</sup>

*Table 2.1: TLAs for the Course: Assembly technology, Partner: KTH*

ILO reference (Highlight the Verb that need be aligned)	Teaching Activity (What the teachers do)	Learning Activity (What the students do)	How does this use the 7 Principles of good learning
ILO1  <b>describe</b> the role of the assembly process within the manufacturing domain and <b>discuss</b> its importance	TA 1.1 <b>Present</b> the role of assembly process in manufacturing.  TA1.2 <b>Explain</b> why assembly process are important.	LA 1.1 <b>Listen</b> to the presentation, take notes, and ask questions.  LA 1.2 <b>Listen</b> to the presentation, take notes and ask questions.  LA 1.3 <b>Discuss</b> the importance of assembly process.	Encourages contact between students and faculty, LA 1.1 LA1.2  Gives prompt feedback, LA 1.3
ILO2  <b>create</b> mathematical and feature models of assemblies and <b>use</b> them in context of design and evaluation of assembly systems	TA2.1 <b>Explain</b> mathematical and feature models of assemblies in the context of design and evaluation of assembly systems.  TA2.2 <b>Describe and show</b> instructions for the project	LA 2.1 <b>Listen</b> to the presentation, take notes, and ask questions.  LA 2.2 <b>Apply and evaluate</b> appropriate models.	Encourages contact between students and faculty LA 2.1 LA 2.2  Encourages active learning LA 2.2  Gives prompt feedback, LA 2.2  Respects diverse talents and ways of learning

<sup>2</sup> 7 principles of good learning:

- encourages contact between students and faculty,
- develops reciprocity and cooperation among students,
- encourages active learning,
- gives prompt feedback,
- emphasizes time on task,
- communicates high expectations
- respects diverse talents and ways of learning

Arthur W. Chickering and Zelda F. Gamson (1987)

			TA 2.2 LA 2.2
ILO3  <b>account for the dynamic and static constraints of a manual or automatic assembly process</b>	TA3.1  <b>Explain dynamic and static constraints of assembly process</b>  TA3.2  <b>Describe and show instructions for the project</b>	LA 3.1  <b>Listen to the presentation, take notes, and ask questions.</b>  LA 3.2  <b>Evaluate the constraints of assembly process.</b>	Encourages contact between students and faculty  LA 3.1 LA 3.2  Encourages active learning  LA 3.2  Gives prompt feedback, LA 3.2  Respects diverse talents and ways of learning  TA 3.2 LA 3.2
ILO4  <b>analyse a given product and define feasible assembly sequences</b>	TA 4.1  <b>Explain assembly sequences.</b>  TA 4.2  <b>Describe and show instructions for the project</b>	LA 4.1  <b>Listen to the presentation, take notes, and ask questions.</b>  LA 4.2  <b>Evaluate and define feasible assembly sequence.</b>	Encourages contact between students and faculty  LA 4.1 LA 4.2  Encourages active learning  LA 4.2  Gives prompt feedback, LA 4.2  Respects diverse talents and ways of learning  TA 4.2 LA 4.2
ILO5  <b>choose the best sequence by applying technical and economic criteria</b>	TA 5.1  <b>Explain technical and economic criteria for assembly sequences.</b>  TA 5.2  <b>Describe and show instructions for the project</b>	LA 5.1  <b>Listen to the presentation, take notes, and ask questions.</b>  LA 5.2  <b>Evaluate and choose the best assembly sequence using technical and economic criteria.</b>	Encourages contact between students and faculty  LA 5.1 LA 5.2  Encourages active learning  LA 5.2  Gives prompt feedback, LA 4.2  Respects diverse talents and ways of learning  TA 5.2 LA 5.2
ILO6  <b>describe the function of all the elements of an assembly system (both automatic and manual)</b>	TA 6.1  <b>Present the function of elements of automatic and manual assembly system.</b>	LA 6.1  <b>Listen to the presentation, take notes, and ask questions.</b>	Encourages contact between students and faculty,  LA 6.1
ILO7	TA 7.1	LA 7.1	Encourages contact between students and faculty

evaluate the impact of the product design on the assembly process, by applying the Boothroyd DFA methodologies	Explain DFA methodologies.  TA 7.2 <b>Describe and show</b> instructions for the project	Listen to the presentation, take notes, and ask questions.  LA 7.2 <b>Apply</b> DFA methodologies to given product.	LA 7.1 LA 7.2  Encourages active learning LA 7.2  Gives prompt feedback, LA 7.2  Respects diverse talents and ways of learning TA 7.2 LA 7.2	
ILO8  <b>identify</b> the requirements on design of an assembly station and <b>provide</b> instructions for the subsequent implementation	TA 8.1 <b>Explain</b> design requirements of assembly station.  TA 8.2 <b>Describe and show</b> instructions for the project	LA 8.1 <b>Listen</b> to the presentation, take notes, and ask questions.  LA 8.2 <b>Discuss and explain</b> the design requirements for assembly station implementation.	Encourages contact between students and faculty LA 8.1 LA 8.2  Encourages active learning LA 8.2  Gives prompt feedback, LA 8.2  Respects diverse talents and ways of learning TA 8.2 LA 8.2	
ILO9  <b>calculate</b> the costs and the most important economical key performance indicators (KPIs) for standard assembly systems (both manual and automatic)	TA 9.1 <b>Explain</b> costs evaluation and economical KPIs for manual and automatic assembly systems.  TA 9.2 <b>Describe and show</b> instructions for the project	LA 9.1 <b>Listen</b> to the presentation, take notes, and ask questions.  LA 9.2 <b>Use</b> costs evaluation and KPIs for manual and automatic assembly.	Encourages contact between students and faculty LA 9.1 LA 9.2  Encourages active learning LA 9.2  Gives prompt feedback, LA 9.2  Respects diverse talents and ways of learning TA 9.2 LA 9.2

### Intended Learning Outcomes (ILOs)

The template for the formulation of the ILO is emphasizing the student perspective. All the ILO are formulated to address directly what is expected from the learner after following the related educational unit. Three are the key elements:

- **Short description:** ILOs has in general from 150 to 250 characters.
- **Bloom Verb Level:** detailing the action expected and referring to the expected level of understanding as expressed in the well-known Bloom taxonomy<sup>1</sup> selecting one of the following level:
  - o Level1\_Recall facts and basic concepts "Remember": (define, duplicate, list, memorize, repeat, state)
  - o Level2\_Explain ideas or concepts "Understand": (classify, describe, discuss, explain, identify, locate, recognize)
  - o Level3\_Use information in new situations "Apply": (execute, implement, solve, use, demonstrate, interpret, operate)
  - o Level4\_Draw connections among ideas "Analyse": (differentiate, organize, relate, compare, distinguish, examine, test, analyze)
  - o Level5\_Justify a stand or decision "Evaluate": (appraise, argue, defend, judge, select, support, value, critique, weigh)
  - o Level 6\_Produce new or original work "Create": (design, assemble, construct, conjecture, formulate, author, investigate)
- **Content** to which the action indicated by the verb refer to and keywords enclosed in parentheses and in italics
- **Context** where the action for the related content must be applied and keywords enclosed in parentheses and in italics

Table 1: ILOs for the Course Planning and control, Partner: KTH

	Short description	Bloom Verb level	Content (keywords)	Context (keywords)
ILO1	explain fundamental principles used in traditional production planning and control systems	Level_2	fundamental principles <i>(production planning, production control, scheduling, inventory management, demand forecasting, capacity planning, production efficiency)</i>	in traditional production planning and control systems <i>(production planning, production control)</i>
ILO2	develop aggregate plans for manufacturing of a multi-component product	Level_6	aggregate plans <i>(aggregate planning, resource allocation, demand forecasting, cost optimization)</i>	manufacturing of a multi-component product <i>(multi-component product)</i>
ILO3	propose and motivate a Master Production Schedule and a Material Requirements Plan for a given aggregate plan	Level_3	Master Production Schedule and a Material Requirements Plan <i>(MRP, bill of material, enterprise resource planning, MPS)</i>	a given aggregate plan

<sup>1</sup> For more info refer to: <https://doi.org/10.3390/educsci12070438>.

ILO4	apply proper inventory control methods for a product with known demand	Level_3	proper inventory control methods <i>(inventory, control, type of inventory, ABC analysis, EOQ model, quantity discount model)</i>	a product with known demand <i>(product, demand)</i>
ILO5	choose the best operations scheduling approach to optimize certain shop floor performance indicators	Level_5	the best operations scheduling approach <i>(scheduling, operations, sequencing rules, line balancing)</i>	optimize certain shop floor performance indicators <i>(KPI, performance indicator)</i>
ILO6	describe the principles of push and pull control policies	Level_2	the principles of push and pull control policies <i>(push, pull, control policies)</i>	
ILO7	explain and utilize appropriate lean tools to continuously improve shop floor performance	Level_2 Level_3	appropriate lean tools <i>(lean philosophy, tools, 5S, Toyota production system, wastes, value stream mapping, PDCA, SMED, Kanban)</i>	continuously improve shop floor performance <i>(continuous improvement, performance)</i>
ILO8	apply value stream mapping for current and future states to a given case study	Level_3	value stream mapping for current and future states <i>(value stream mapping, current state, future state, action plan, lead time, capacity analysis, continuous flow, factory layout, product families, heijunka)</i>	a given case study <i>(case study)</i>

### Teaching and Learning Activities (TLA)

The template for the formulation of the TLA is emphasizing the following dimensions:

- What is the teacher supposed to do to enact the underlying ILO

Co-funded by  
the European Union

- What is the learner supposed to do to enact the underlying ILO
- How does the suggested activity relate to good teaching practices as expressed in the 7 principles of good learning<sup>2</sup>

Table 2.1: TLAs for the Course: Planning and control, Partner: KTH

ILO reference (Highlight the Verb that need be aligned)	Teaching Activity (What the teachers do)	Learning Activity (What the students do)	How does this use the 7 Principles of good learning
ILO1  <b>explain</b> fundamental principles used in traditional production planning and control systems	TA 1.1 <b>Present</b> the principles used in traditional production planning and control systems.	LA 1.1 <b>Listen</b> to the presentation, take notes, and ask questions.  LA 1.2 <b>Listen</b> to the presentation, take notes and ask questions.	Encourages contact between students and faculty, LA 1.1 LA1.2  Gives prompt feedback, LA 1.3
	TA1.2 <b>Explain</b> why they are important.	LA 1.3 <b>Discuss</b> the importance of the presented principles.	
ILO2  <b>develop</b> aggregate plans for manufacturing of a multi-component product	TA2.1 <b>Explain</b> aggregate planning for manufacturing multi-component product.	LA 2.1 <b>Listen</b> to the presentation, take notes, and ask questions.	Encourages contact between students and faculty LA 2.1 LA 2.2  Encourages active learning LA 2.2
	TA2.2 <b>Describe</b> and <b>show</b> Examples during class tutorial	LA 2.2 <b>Create, apply</b> and <b>evaluate</b> appropriate aggregate planning solutions.	Gives prompt feedback, LA 2.2  Respects diverse talents and ways of learning TA 2.2 LA 2.2
ILO3  <b>propose</b> and <b>motivate</b> a Master Production Schedule and a Material	TA3.1 <b>Explain</b> MPS and MRP for aggregate planning	LA 3.1 <b>Listen</b> to the presentation, take notes, and ask questions.	Encourages contact between students and faculty LA 3.1 LA 3.2  Encourages active learning LA 3.2
	TA3.2 <b>Describe</b> and <b>show</b>	LA 3.2	

<sup>2</sup> 7 principles of good learning:

- encourages contact between students and faculty,
- develops reciprocity and cooperation among students,
- encourages active learning,
- gives prompt feedback,
- emphasizes time on task,
- communicates high expectations
- respects diverse talents and ways of learning

Arthur W. Chickering and Zelda F. Gamson (1987)

Requirements Plan for a given aggregate plan	Examples during tutorial class.	<b>Apply</b> the explained methods MPS and MRP for aggregate planning and <b>solve</b> the exercises proposed on MPS and MRP.	Gives prompt feedback, LA 3.2  Respects diverse talents and ways of learning TA 3.2 LA 3.2
ILO4  <b>apply</b> proper inventory control methods for a product with known demand	TA 4.1 <b>Explain</b> inventory control methods.  TA 4.2 <b>Describe and show</b> Examples during tutorial class	LA 4.1 <b>Listen</b> to the presentation, take notes, and ask questions.  LA 4.2 <b>Apply and use</b> the inventory control methods in the given exercises.	Encourages contact between students and faculty LA 4.1 LA 4.2  Encourages active learning LA 4.2  Gives prompt feedback, LA 4.2  Respects diverse talents and ways of learning TA 4.2 LA 4.2
ILO5  <b>choose</b> the best operations scheduling approach to optimize certain shop floor performance indicators	TA 5.1 <b>Explain</b> operations scheduling approaches.  TA 5.2 <b>Describe and show</b> Examples during tutorial class	LA 5.1 <b>Listen</b> to the presentation, take notes, and ask questions.  LA 5.2 <b>Evaluate and select</b> the best operations scheduling approach for optimizing production performance indicators.	Encourages contact between students and faculty LA 5.1 LA 5.2  Encourages active learning LA 5.2  Gives prompt feedback, LA 4.2  Respects diverse talents and ways of learning TA 5.2 LA 5.2
ILO6  <b>describe</b> the principles of push and pull control policies	TA 6.1 <b>Present</b> the push and pull control principles.	LA 6.1 <b>Listen</b> to the presentation, take notes, and ask questions.	Encourages contact between students and faculty, LA 6.1
ILO7  <b>explain and utilize</b> appropriate lean tools to continuously improve shop floor performance	TA 7.1 <b>Explain</b> lean principles and tools.  TA 7.2 <b>Describe and show</b> instructions for lean laboratory sessions	LA 7.1 <b>Listen</b> to the presentation, take notes, and ask questions.  LA 7.2 <b>Explain, discuss and apply</b> appropriate lean tools during the lean laboratory sessions.	Encourages contact between students and faculty LA 7.1 LA 7.2  Encourages active learning LA 7.2  Gives prompt feedback, LA 7.2  Respects diverse talents and ways of learning

			TA 7.2 LA 7.2
ILO8  <b>apply</b> value stream mapping for current and future states to a given case study	TA 8.1 <b>Explain</b> value stream mapping tool.  TA 8.2 <b>Describe and show</b> instructions for the project	LA 8.1 <b>Listen</b> to the presentation, take notes, and ask questions.  LA 8.2 <b>Discuss, explain and use</b> the value stream mapping for a given case study.	Encourages contact between students and faculty LA 8.1 LA 8.2  Encourages active learning LA 8.2  Gives prompt feedback, LA 8.2  Respects diverse talents and ways of learning TA 8.2 LA 8.2

Table 3: Learning activities examples (column 3)

Bloom Taxonomy	EGV	Learning Activities (Examples)
Remember	arrange, define, list, identify	Lecture, Reading materials
Comprehension	classify, discuss, present, rewrite	Mind map, Think-pair-share, Discussion, Reflection, Fishbowl
Apply	solve, calculate, demonstrate, organize, use	Case study in real-life situations, Problem-solving tasks, Roleplay, Group work, Laboratory
Analyze	categorize, contrast, compare, debate, inspect	Debates, Class discussion, Jigsaw method, Think-pair-share, Fishbowl, Laboratory
Evaluate	assess, conclude, justify, measure	Journal, Debates, Mind map, Peer evaluation
Create	design, develop, revise, formulate	Brainstorm, Design a presentation, Create a new report, Construct a roleplay

### Assessment Task

The template for the formulation of the AT is emphasizing different assessment strategies for different verbs and different learning style.

[Link to material](#)

Table 4: ATs for the Course: Planning and control, Partner: KTH

ILO reference (Highlight the Verb)	Assessment task 1	Assessment task 2	Assessment task n
ILO1  <b>explain</b> fundamental principles used in traditional production planning and control systems	<b>Bloom level:</b> 2  <b>Type***:</b> Exam questions  <b>Short description:</b> Answer questions related to the fundamental principles of production planning and control.		
ILO2	<b>Bloom level:</b> 6		

7

Co-funded by  
the European Union

<p><b>develop</b> aggregate plans for manufacturing of a multi-component product</p>	<p><b>Type***:</b> Exam questions</p> <p><b>Short description:</b> <b>Solve</b> the proposed exercises and <b>design</b> the aggregate plan accordingly (resource allocation, cost optimization)</p>		
ILO3  <b>propose</b> and <b>motivate</b> a Master Production Schedule and a Material Requirements Plan for a given aggregate plan	<b>Bloom level:</b> 3	<p><b>Type***:</b> Exam questions</p> <p><b>Short description:</b> <b>Solve</b> the proposed exercises on MRP and MPS.</p>	
ILO4  <b>apply</b> proper inventory control methods for a product with known demand	<b>Bloom level:</b> 3	<b>Bloom level:</b> 3	<p><b>Type***:</b> Laboratory</p> <p><b>Short description:</b> <b>Analyse</b> and <b>discuss</b> proper inventory control approaches given the proposed production game/simulation.</p>
ILO5  <b>choose</b> the best operations scheduling approach to optimize certain shop floor performance indicators	<b>Bloom level:</b> 5	<p><b>Type***:</b> Exam questions</p> <p><b>Short description:</b> <b>Solve</b> the proposed exercises on operation scheduling to maximise shop floor performance.</p>	
ILO6  <b>describe</b> the principles of push and pull control policies	<b>Bloom level:</b> 2	<b>Bloom level:</b> 2	<p><b>Type***:</b> Laboratory</p> <p><b>Short description:</b> <b>Answer</b> questions related to push and pull control.</p> <p><b>Short description:</b> <b>Discuss</b> the principles of push and pull control in the given assembly line.</p>
ILO7  <b>explain</b> and <b>utilize</b> appropriate lean tools to continuously improve shop floor performance	<b>Bloom level:</b> 2-3	<p><b>Type***:</b> Laboratory</p> <p><b>Short description:</b> <b>Analyse</b>, <b>explain</b> and <b>discuss</b> proper lean tools to minimise the waste in the given assembly line.</p>

Table 5: AT examples

Bloom Taxonomy	EGV	Assessment Task (Examples)
Remember	arrange, define, list, identify	Multiple choice, quiz/test, question banks, take-home examinations, Concept/mind maps, interview, debate, problem sheet, minutes, forum posts, open-book, individual presentation, group presentation
Comprehension	classify, discuss, present, rewrite	Abstract, case study, problem-solving tasks, roleplay, group work, portfolio, workbook, project
Apply	solve, calculate, demonstrate, organize, use	Theory, annotated bibliography, literature review, debates, class discussion, jigsaw method, think-pair-share, fishbowl, laboratory Report, reflection, journal, debates, mind map, peer evaluation, group work, teamwork
Analyze	categorize, contrast, compare, debate, inspect	Thesis, annotated bibliography, literature review, debates, class discussion, jigsaw method, think-pair-share, fishbowl, laboratory Report, reflection, journal, debates, mind map, peer evaluation, group work, teamwork
Evaluate	assess, conclude, justify, measure	Project, thesis, article, essay, creative work, demonstration, performance, roleplay, recorded/rendered creative work,
Create	design, develop, revise, formulate	Project, thesis, article, essay, creative work, demonstration, performance, roleplay, recorded/rendered creative work,

## 6.3. UNIPI

### Intended Learning Outcomes (ILOs)

The template for the formulation of the ILO is emphasizing the student perspective. All the ILO are formulated to address directly what is expected from the learner after following the related educational unit. Three are the key elements:

- **Short description:** ILOs has in general from 150 to 250 characters.
- **Bloom Verb Level:** detailing the action expected and referring to the expected level of understanding as expressed in the well-known Bloom taxonomy<sup>1</sup> selecting one of the following level:
  - o Level1\_Recall facts and basic concepts "Remember": (define, duplicate, list, memorize, repeat, state)
  - o Level2\_Explain ideas or concepts "Understand": (classify, describe, discuss, explain, identify, locate, recognize)
  - o Level3\_Use information in new situations "Apply": (execute, implement, solve, use, demonstrate, interpret, operate)
  - o Level4\_Draw connections among ideas "Analyze": (differentiate, organize, relate, compare, distinguish, examine, test, analyze)
  - o Level5\_Justify a stand or decision "Evaluate": (appraise, argue, defend, judge, select, support, value, critique, weigh)
  - o Level 6\_Produce new or original work "Create": (design, assemble, construct, conjecture, formulate, author, investigate)
- **Content** to which the action indicated by the verb refer to and keywords enclosed in parentheses and in italics
- **Context** where the action for the related content must be applied and keywords enclosed in parentheses and in italics

Table 1: ILOs for the Course: Manufacturing processes, Partner: Unipi

	Short description	Bloom Verb level	Content (keywords)	Context (keywords)
ILO 1	Evaluate advanced machining processes and their quality, productivity, and costs in manufacturing environments and operations	Level_5	advanced machining processes and their quality, productivity, and costs <i>(turning, drilling, milling, and grinding)</i>	Chip removal operations <i>(chip removal, manufacturing processes, industrial, industry)</i>
ILO 2	Design and optimize casting processes considering model and core design, gating system, cooling modules, and material properties. Evaluate economic feasibility, identify and rectify common foundry defects, and apply Design for Manufacturing principles.	Level_6	manufacturing, quality and, cost principles of various casting processes <i>(model design, core design, gating system, cooling modules, material properties, feasibility, foundry defects.)</i>	Casting operations
ILO 3	Evaluate metal forming processes through extrusion and rolling techniques,	Level_5	manufacturing, quality and, cost principles of	Metal forming operations

<sup>1</sup> For more info refer to: <https://doi.org/10.3390/educsci12070438>.

Co-funded by  
the European Union

	applying principles of deformation and friction analysis, and selecting appropriate equipment for operations like forging and sheet metal processing.		various metal forming processes <i>(extrusion and rolling techniques, principles of deformation and friction analysis, equipment)</i>	
ILO 4	Apply and use metrology concepts such as tolerance, geometric errors, surface texture, precise instruments (calipers, micrometers), and CMMs for accurate inspections, and program measurements effectively	Level_3	Metrology, quality and, cost principles of various inspection processes <i>(tolerance, geometric errors, surface texture, precise instruments (calipers, micrometers), and CMMs)</i>	Metrology and inspection operations
ILO 5	Analyze and evaluate joining techniques in manufacturing such as welding (gas, arc, resistance, brazing, plasma) and related defects	Level_3	manufacturing, quality and, cost principles of various joining processes <i>(welding (gas, arc, resistance, brazing, plasma) and related defects)</i>	Joining operations

### Teaching and Learning Activities (TLA)

The template for the formulation of the TLA is emphasizing the following dimensions:

- What is the teacher supposed to do to enact the underlying ILO
- What is the learner supposed to do to enact the underlying ILO
- How does the suggested activity relate to good teaching practices as expressed in the 7 principles of good learning<sup>2</sup>

*Table 2.1: TLAs for the Course: Manufacturing processes, Partner: Unipi*

ILO reference (Highlight the Verb that need be aligned)	Teaching Activity (What the teachers do)	Learning Activity (What the students do)	How does this use the 7 Principles of good learning
ILO 1 <b>Evaluate</b> advanced machining processes and their quality, productivity, and costs in manufacturing environments and operations	TA 1.1 <b>Present</b> machining processes in manufacturing  TA 1.2 <b>Explain</b> how chip removal technology can be applied for manufacturing a part  TA 1.3 <b>Describe</b> and <b>show</b> a real application of machining processes for manufacturing a part and instructions for the project case  TA 1.4 <b>Encourage</b> discussion on the application provided.	LA 1.1 <b>Listen</b> to the presentation, take notes, and ask questions.  LA 1.2 <b>Listen</b> to the presentation, take notes and ask questions.  LA 1.3 <b>Apply</b> and <b>evaluate</b> chip removal principles on the project case.  LA 1.4 <b>Discuss</b> about the experience on the application provided.	Encourages contact between students and faculty, LA 1.1 LA1.2  Encourages active learning TA 1.3 TA 1.4 LA 1.3 LA 1.4  Gives prompt feedback, TA 1.4 LA 1.3 LA 1.4  Respects diverse talents and ways of learning TA 1.3 LA 1.3

<sup>2</sup> 7 principles of good learning:

- encourages contact between students and faculty,
- develops reciprocity and cooperation among students,
- encourages active learning,
- gives prompt feedback,
- emphasizes time on task,
- communicates high expectations
- respects diverse talents and ways of learning

Arthur W. Chickering and Zelda F. Gamson (1987)

## 6.4. PRz

### Intended Learning Outcomes (ILOs)

The template for the formulation of the ILO is emphasizing the student perspective. All the ILO are formulated to address directly what is expected from the learner after following the related educational unit. Three are the key elements:

- **Short description:** ILOs has in general from 150 to 250 characters.
- **Bloom Verb Level:** detailing the action expected and referring to the expected level of understanding as expressed in the well-known Bloom taxonomy<sup>1</sup> selecting one of the following level:
  - o Level1\_Recall facts and basic concepts "Remember": (define, duplicate, list, memorize, repeat, state)
  - o Level2\_Explain ideas or concepts "Understand": (classify, describe, discuss, explain, identify, locate, recognize)
  - o Level3\_Use information in new situations "Apply": (execute, implement, solve, use, demonstrate, interpret, operate)
  - o Level4\_Draw connections among ideas "Analyze": (differentiate, organize, relate, compare, distinguish, examine, test, analyze)
  - o Level5\_Justify a stand or decision "Evaluate": (appraise, argue, defend, judge, select, support, value, critique, weigh)
  - o Level 6\_Produce new or original work "Create": (design, assemble, construct, conjecture, formulate, author, investigate)
- **Content** to which the action indicated by the verb refer to and keywords enclosed in parentheses and in italics
- **Context** where the action for the related content must be applied and keywords enclosed in parentheses and in italics

Table 1: ILOs for the Data analysis, Partner: PRz

	Short description	Bloom Verb level	Content (keywords)	Context (keywords)
ILO1	describe modern information technologies, such as OLAP, data warehouses, data mining methods , artificial intelligence methods	Level_2	Modern information technologies <i>(OLAP, data warehouse, data mining, artificial intelligence, management desktop)</i>	decision support processes
ILO2	Implement an example management desktop	Level_3	management desktop <i>(management desktop, data visualization, Excel, pivot tables)</i>	Data visualization

### Teaching and Learning Activities (TLA)

The template for the formulation of the TLA is emphasizing the following dimensions:

- What is the teacher supposed to do to enact the underlying ILO
- What is the learner supposed to do to enact the underlying ILO
- How does the suggested activity relate to good teaching practices as expressed in the 7 principles of good learning<sup>2</sup>

Table 2.1: TLAs for the Course: Data analysis, Partner: PRz

ILO reference (Highlight the Verb that need be aligned)	Teaching Activity (What the teachers do)	Learning Activity (What the students do)	How does this use the 7 Principles of good learning
ILO1  <b>describe</b> modern information technologies, such as OLAP, data warehouses, data mining methods, artificial intelligence methods	TA 1.1  <b>Present</b> modern information technologies, such as OLAP, data warehouses, data mining methods , artificial intelligence methods  TA 1.2  <b>Demonstrate</b> the use of data mining methods to discover knowledge from data	LA 1.1  <b>Listen</b> to the presentation, take notes, and ask questions.  LA 1.2  <b>Apply</b> selected data mining methods	Encourages contact between students and faculty, LA 1.1 LA1.2  Encourages active learning LA 2.2  Gives prompt feedback, LA 2.2
ILO 2  <b>Implement</b> an example management desktop	TA 2.1  <b>Present</b> the possibilities and role of management desktops in a decision support processes TA 2.2  <b>Demonstrate</b> the use of Excel to visualize data and to design a management desktop	LA 2.1  <b>Listen</b> to the presentation, take notes, and ask questions.  LA 2.2  <b>Implement</b> an example management dashboard	Encourages contact between students and faculty, LA 1.1  Encourages active learning LA 2.2

<sup>2</sup> 7 principles of good learning:

- encourages contact between students and faculty,
- develops reciprocity and cooperation among students,
- encourages active learning,
- gives prompt feedback,
- emphasizes time on task,
- communicates high expectations
- respects diverse talents and ways of learning
